

Canalside Hamm

Hamm, 2018 Ongoing project
Urban design

A design by schneider + schumacher and Carla Lo Landschaftsarchitekten has won 2nd prize in a limited urban competition entitled: "Canalside Hamm - Inner City 2030". The city of Hamm aims to open up the city centre towards the canal, developing commercial space and living on the waterfront.

schneider+schumacher and Carla Lo's concept closes the gap in the existing urban structure with new buildings close to the centre. A generously designed promenade provides a direct connection between the city centre and the new, open-structured district on the canal. The promenade is embedded in the existing park, catering for a juxtaposition of pedestrian and bicycle traffic. An open square, numerous green areas and a generously designed timber terrace facing onto the canal provide additional uses and bring people directly to the canalside.
