

Lightpad

2016

Design/Object

The Lightpad's timeless simple design fits into every type of working environment and minimises visual clutter. It provides optimal lighting via modular luminaires fitted with LED technology, and offers double-asymmetric lighting. To meet the needs of new office design concepts, schneider+schumacher, working with the Swiss lighting company Regent, has created a standing luminaire. With just one stanchion it can provide uniform illumination for a group of desks with up to four workplaces. The rim of the luminaire head has an optimised arrangement of light diodes. The light's controls and sensor technology are integrated into the stanchion.

The Lightpad has been named as a winner in both the Lighting category of the 2017 German Design Awards, and the IF Design Award 2017 in the Product Design category.
