

Riedberg High School

Frankfurt am Main, 2009
Schools/educational facilities

During the competition for a high school in Frankfurt Riedberg with six tracks, we wanted to investigate one thing: how compact can a school with such a large spatial requirement be? Our findings showed that while offering plenty of meeting space which fosters a growing community environment it can be very compact. The scheme shows a distinctive building for the new quarter and was awarded a commendation for its courageous idea and consistent design.
